STATEMENT OF RELEVANCY

Reference AO (JP 8-187240) on Form PTO- 1449:

The invention shows a computed tomography that collects projection data sets by helical scanning using a two-dimensional detector. '240 extracts approximate projection data for an x-ray path approximate to a position an arbitrarily determined virtual plane (for example, an oblique plane) from the projection data sets, and reconstructs an image based on the approximate projection data.

Reference AP (JP 5-317302) on Form PTO- 1449:

The invention shows a computed tomography that generates a vertical section image and a virtual section image based on projection data sets collected by helical scanning. A blue and an artifact of the images are obtained from a differential image between the vertical section image and the virtual section image.
